Professional Experience

Full Stack Developer | 2022–2022 (4 months) – MultiOS

- Co-developed a Django web application as part of a pair-programming project, based on the reverse engineering of a POC designed to assess the compliance of materials and manufacturing processes with ISO standards.
- Wrote technical documentation and presented the developed solution.

IT Support | 2022–2022 (1 month) – IPG Gosselies

- Prepared, configured, and deployed more than 30 workstations.
- Replaced IT equipment across 3 company facilities.
- Provided support in managing and maintaining the company's IT infrastructure.

Education & Training

Technofutur-Tic

- Software Architect | 2025–2026 (6 months)
- Web Application Developer | 2024 (6 months)
- Network Architecture | 2021 (1 month)
- Joomla & WordPress CMS | 2018 (1 month)

Haute école Condorcet

Bachelor's Degree in Business Computing | Haute École Provinciale de Hainaut – Condorcet, Charleroi | 2018–2023 (Graduated)

Soft skills

- **Adaptability**
- **Analytical thinking**
- **Self-motivated learner**
- Teamwork
- Compliance-minded
- Sociable

Technical Skills

- Java
- Spring Boot
- Maven
- Nginx
- HTML | CSS | JS
- XML | JSON
- TypeScript
- Angular
- Kotlin
- NodeJS
- ExpressJS
- UML
- SQL | PL-SQL | T-SQL
- Figma
- Docker
- Git

Personal Projects

Password Manager - Android Application

An Android application designed to securely centralize and manage users' login credentials, eliminating the need to memorize multiple account passwords.

Developed Features

- Data encryption using AES-256
- Backup and notification system
- Quick account search functionality
- Automatic application lock after a period of inactivity

Technical Challenges

- Implementing secure data encryption
- Managing the backup system
- Designing and implementing a MVVM architecture

Technologies

Java - Room Database - Material Design 3 - Figma - Git

PC game save backup platform - Website

A web platform designed to catalog PC game save files, with an interface facilitating their search and organization, as well as a dedicated tutorial section to assist users.

Development & Infrastructure

- Deployed in production a Dockerized infrastructure using Nginx, PHP/FastCGI, MariaDB, and Cloudflare
- Deployed and secured the application using Cloudflare and Cloudflare
- Implemented a CI/CD pipeline with GitHub Actions
- Automated production deployments
- Designed a storage solution capable of handling more than 20,000 game saves
- Optimized bandwidth usage through Gzip compression, minification, and Cloudflare caching

Technical Challenges

- Designing a reliable and scalable infrastructure
- Optimizing application performance and bandwidth usage
- Automating and securing the deployment process

Technologies

PHP - AJAX - MariaDB - Nginx - pagination system - FastCGI - SEO - Cloudflare - Docker - Git - UML - CI/CD - Tailscale - cloud storage - shorter link
